You successfully ran a case called case001 for 10 years (in a single submission). You want to extend your run for another 10 years. How can you do this?

What variable(s) do you need to change (specify the values)?

Set the variable \texttt{CONTINUE\_RUN= TRUE}

Resubmit the run: \texttt{./case001.submit}

Because you got 10 years in 1 submission, you have

\texttt{STOP\_OPTION = nyears}

\texttt{STOP\_N = 10}

\texttt{RESUBMIT = 0}

Common mistake:

\texttt{RESUBMIT =1} => your run will resubmit twice

There is no need to rebuild, \texttt{cesm\_set\_up}.

This is not a branch run.
