SDWG Goals and Functions

- “enhance CESM and its application in order to improve understanding of the interactions between human and earth systems”
- “foster and sustain dialogue between the CESM community and other communities of researchers and practitioners studying interaction of society and climate change and variability and implementing measures to adapt to or mitigate climate change”
- Beyond dialogue:
  - Pilot projects?
  - Contribute to community projects
  - Recommend model developments, output, diagnostics
  - Carry out/recommend model simulations
