

# Land Ice Working Group discussion session

- 1) Research directions: which topics do we want to address as a community with CESM3? Where are the opportunities?
- 2) Opportunities for model-observation combination?
- 3) Plans and opportunities for collaborations with other working groups (Paleo, polar, ocean, biogeochemistry - e.g., AABW changes and carbon cycle)
- 4) Are there barriers for the community in using Land Ice resources and model?
