Stomatal Conductance Models – Empirical Models

Empirical Models

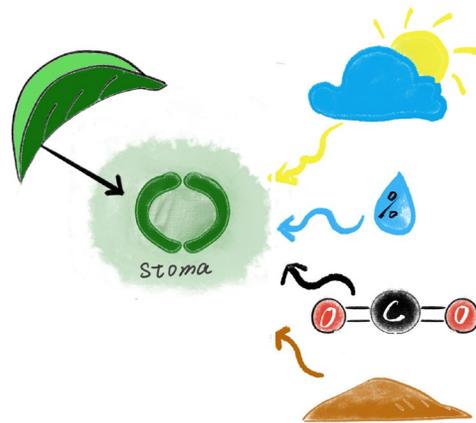

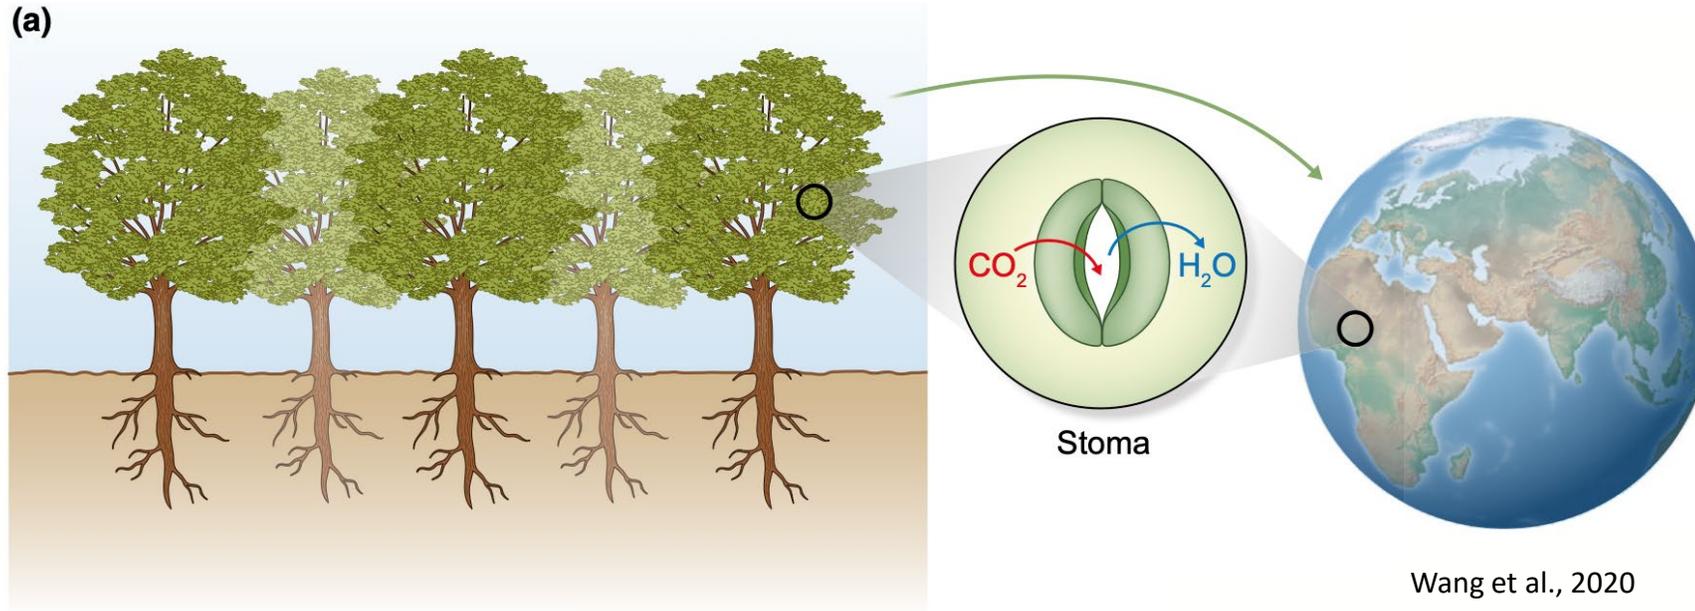

Table 2. Equations relative to the models of g_s .

1. Jarvis 1976	$g_s = f(Q) \cdot f(T) \cdot f(VPD) \cdot f(C) \cdot f(\Psi)$	28. Oren et al. 1999	$g_s = \frac{K_{st}}{A_s} \cdot \frac{\Psi_s - \Psi_a}{VPD}$
2. White et al. 1992	$g_s = f_{max} \cdot f(Q) \cdot f(T) \cdot f(VPD)$	29. Tyree & Sperry 1988 Sperry et al. 1998	$F = K_{st} (\Psi_a - \Psi_s)$ architecture description
3. Noe & Gorchs 2004	$g_s = f_{max} \cdot \min(Q, f(VPD))$	30. Tuzet et al. 2003	$g_s = 1.6 \left[g_0 + f(\Psi_s) \cdot \frac{\Delta a_m}{C_s - \Gamma} \right]$ $f(\Psi_s) = \frac{1 + \exp(\alpha \cdot \Psi_s)}{1 + \exp(\alpha(\Psi_s - \Psi_{s1}))}$ $E = \frac{\Psi_s - \Psi_a}{X}$
4. Lobhammer et al. 1980	$g_s = \frac{1}{(1 + \frac{VPD}{\beta})^2}$	31. Jones & Sutherland 1991	$\Psi_s - \Psi_a = - \frac{c \cdot VPD \cdot g_s}{K_{st}(\Psi)}$ $K_{st}(\Psi) = \begin{cases} K_{stmax} & \text{if } \Psi_{s1} < \Psi_s \\ K_{stmax} \cdot \frac{\Psi_s - \Psi_{s2}}{\Psi_{s1} - \Psi_{s2}} & \text{if } \Psi_{s1} > \Psi_s > \Psi_{s2} \\ 0 & \text{if } \Psi_{s2} > \Psi_s \end{cases}$
5. Monteith 1995	$g_s = f_{max} \cdot VPD$		
6. Monteith 1995	$g_s = a(1 - b \cdot E)$		
7. Delwiche & Cooke 1977	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
8. Dewar 1985	$A_n = P_n - L_n - E_n = f(P_n, P_{so})$ via set of differential equations integrated P_n & P_{so} , water potentials, osmotic potentials, water vapour resistances and water fluxes $E_n = g_s(P_n - P_a)$ $g_s = g_s^{max} \cdot \Delta \Psi$ $\Delta \Psi = \frac{P_n - P_{so}}{C_s}$ $\Delta \Psi = f(\Delta \Psi_{max}, C_s, \Delta)$		
9. Ball et al. 1987	$g_s = g_s^{max} + A_n \frac{H_0}{C_s}$ $g_s = g_s^{max} + \frac{A_n H_0}{C_s}$		
10. Aguiló & Jarvis 1993	$g_s = g_s^{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
11. Louie 1996	$g_s = g_s^{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
12a. Louie 1996	$g_s = g_s^{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
12b. Louie 1996	$g_s = g_s^{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
13. Farquhar & Wong 1984	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
14. Jarvis & Davies 1998	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
15. Stewart 1988	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
16. Minsion et al. 2004	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
17. Macfarlane et al. 2004	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
18. Ogle & Reynolds 2002	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
19. Tashiro et al. 1990	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
20. Baldocchi 1997	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
21. Sala & Tashiro 1996	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
22. Minsion et al. 2004	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
23. Wang & Louie 1998	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
24. Van Wijk et al. 2000	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
25. Uddling et al. 2005	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
26. Tardieu & Davies 1993	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		
27. Gutshick & Simmonson 2002	$g_s = f_{max} \cdot \frac{1}{1 + \exp(\alpha \cdot VPD)}$		

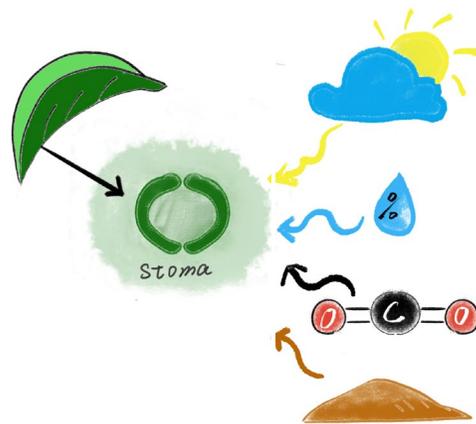

35 Empirical Stomatal Conductance Models

Damour et al., 2010

Stomatal Conductance Models – Empirical Models

Empirical Models

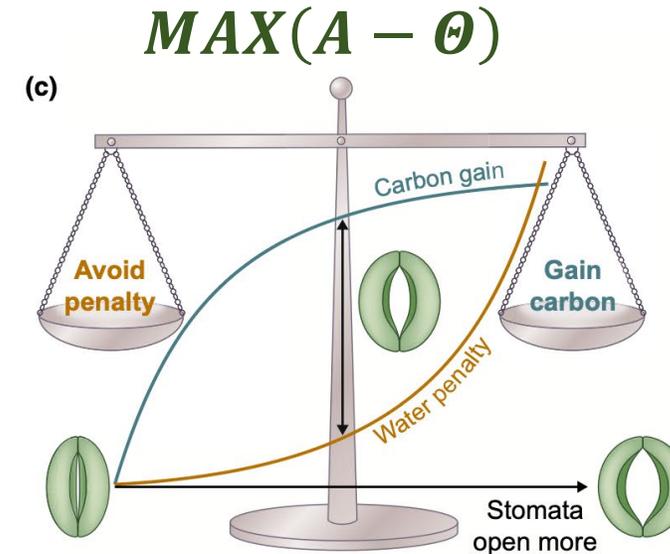

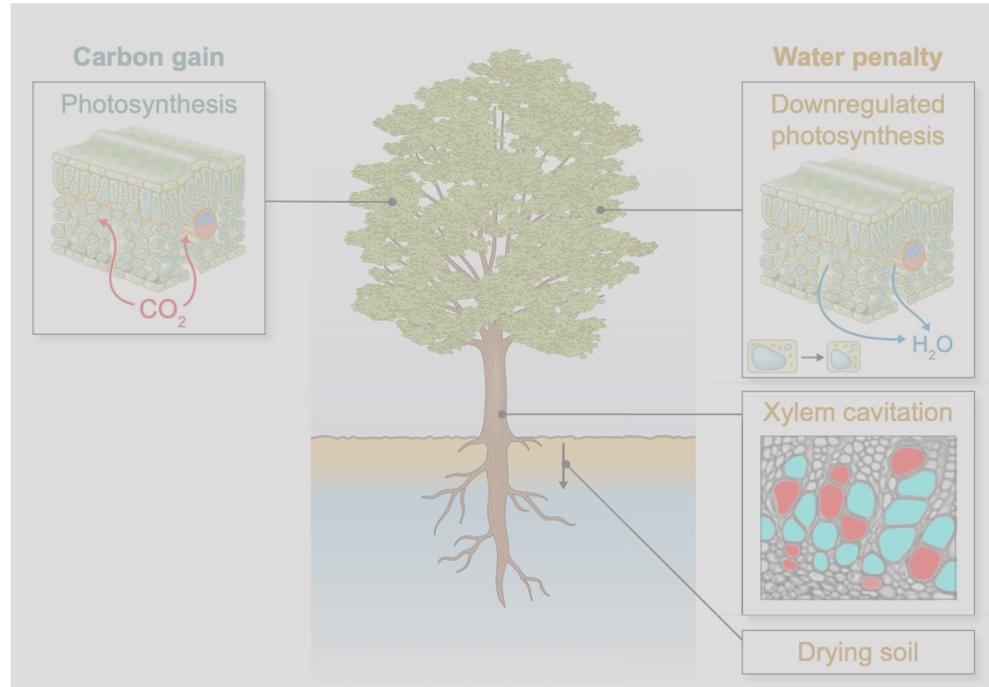

Ball et al., 1987 : $g_s = g_0 + g_1 h_s \frac{A_n}{c_s}$

Leuning 1995 : $g_s = g_0 + g_1 \frac{A_n}{(1 + \frac{VPD}{D_0})(c_s - \Gamma)}$

Tuzet et al., 2003: $g_s = g_0 + 1.6 g_1 \zeta \frac{A_n}{c_s}$

...

Stomatal Conductance Models – Optimization Models

Wang et al., 2020

Penalty based on **water supply**

- Cowan-Farquhar model (WUE, 1977)
- Makela model (1996)
- Manzoni model (2013)
- Prentice model (2014)
- Lu model (2016)
- **Medlyn model (2011)**

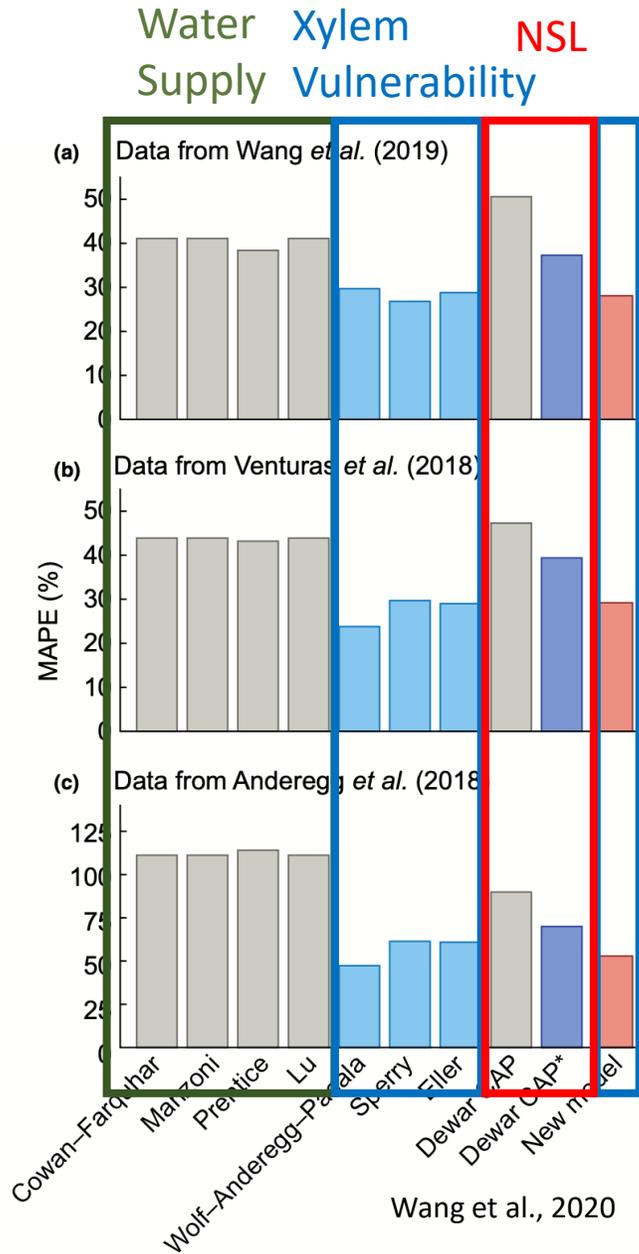

Penalty based on **xylem vulnerability to cavitation**

- Wolf-Anderegg-Pacala model (CM, 2016)
- Sperry model (2017)
- Eller model (SOX, 2018)
- Wang model (2020)
- **Eller model (2022)**

Penalty based on **nonstomatal limitation (NSL) to photosynthesis**

- Holttala model (2017)
- Dewar model (2018)

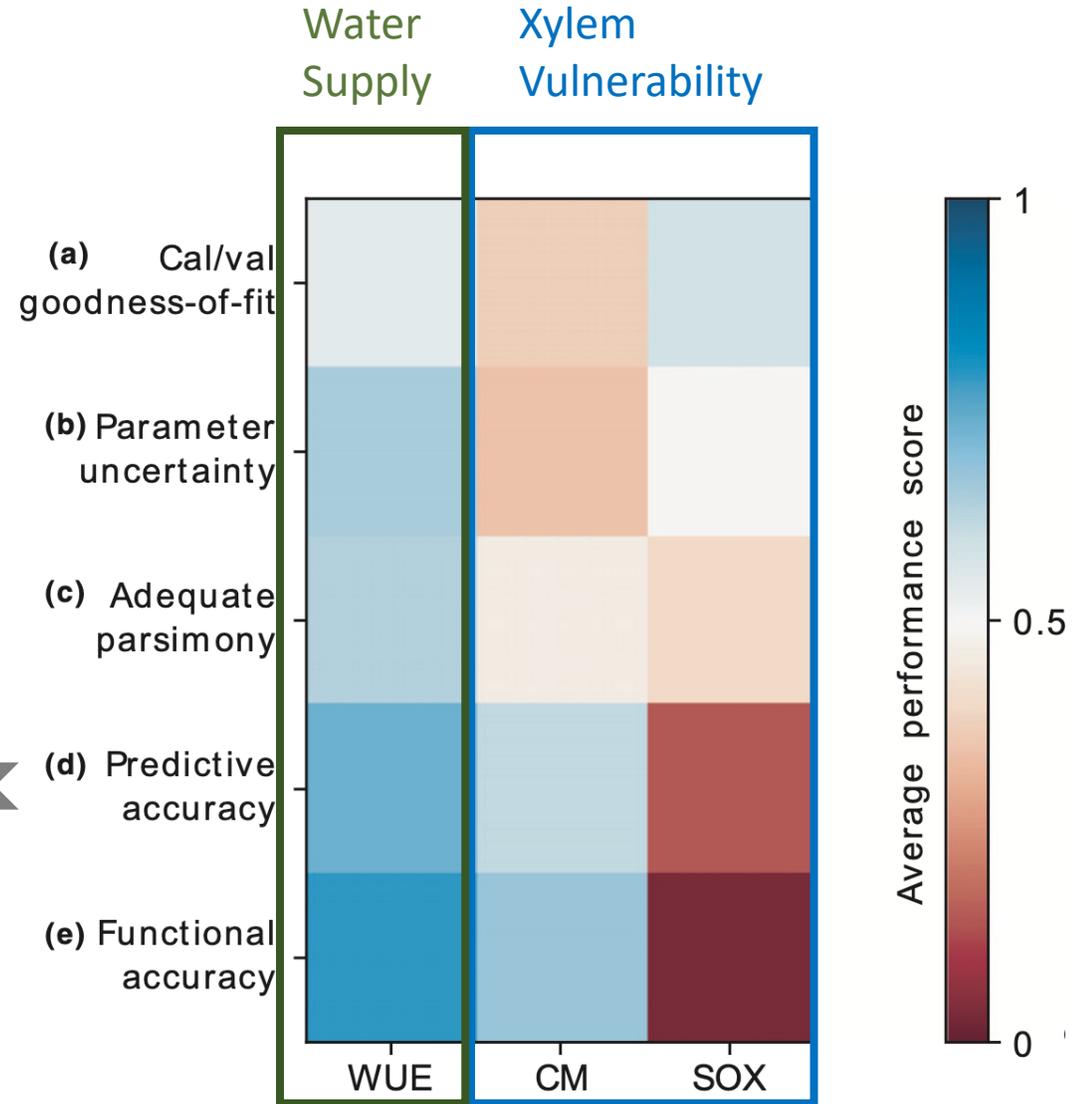

Which Optimality Model Performs Better?

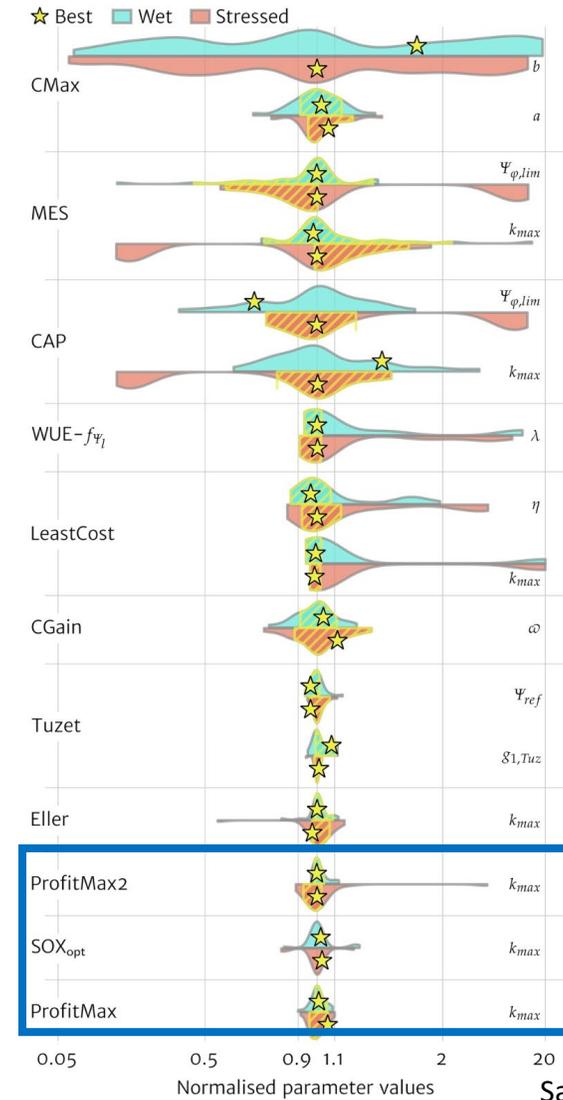

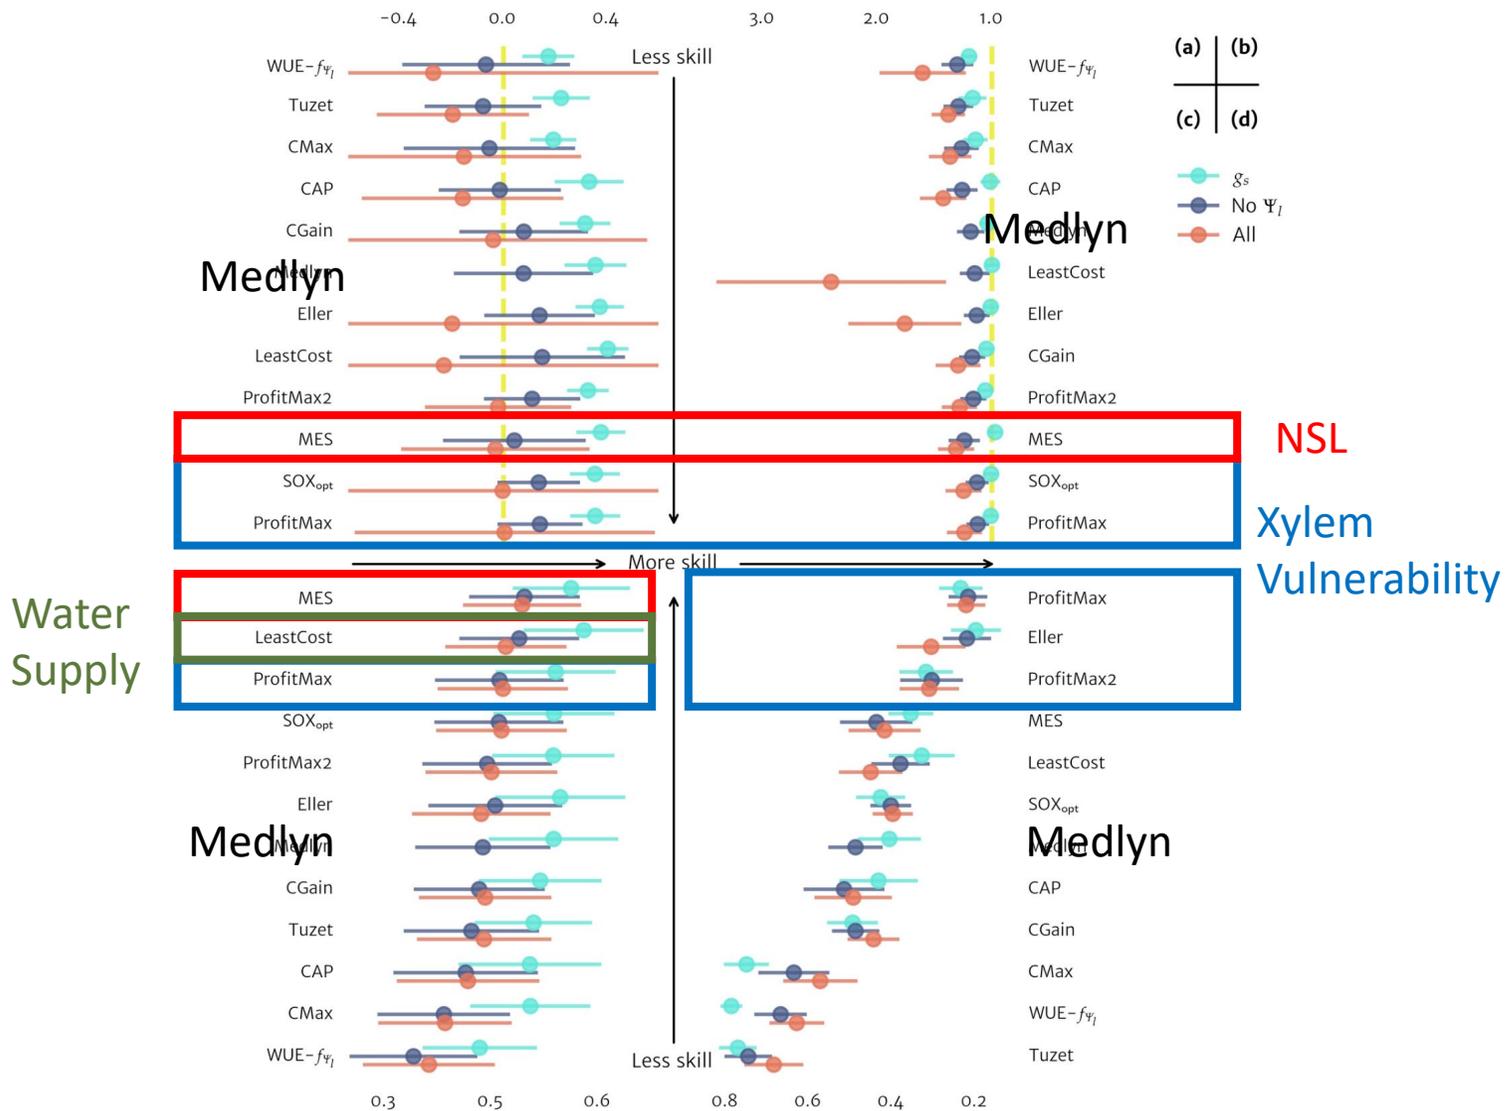

➔ **xylem-vulnerability and NSL based optimization models meet > 6 criteria**

➔ **Xylem-vulnerability models show lower MAPE**

◀ **Water-supply based models (WUE) show better predictive and functional performance than xylem-vulnerability models (SOX, CM)**

Which Model Performs Better?

Sabot et al., 2022

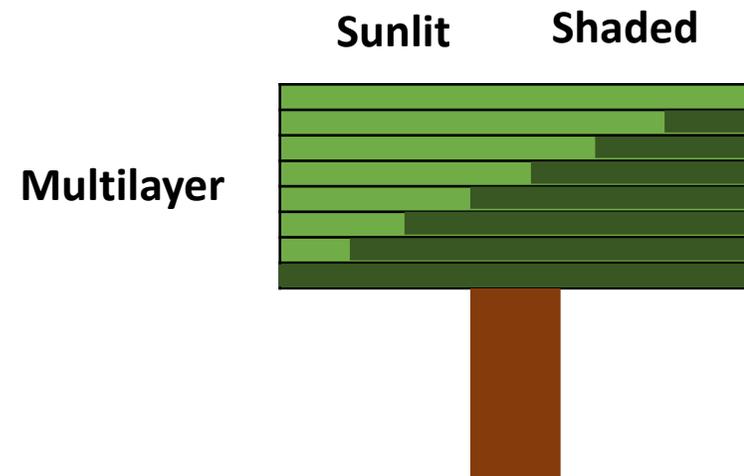

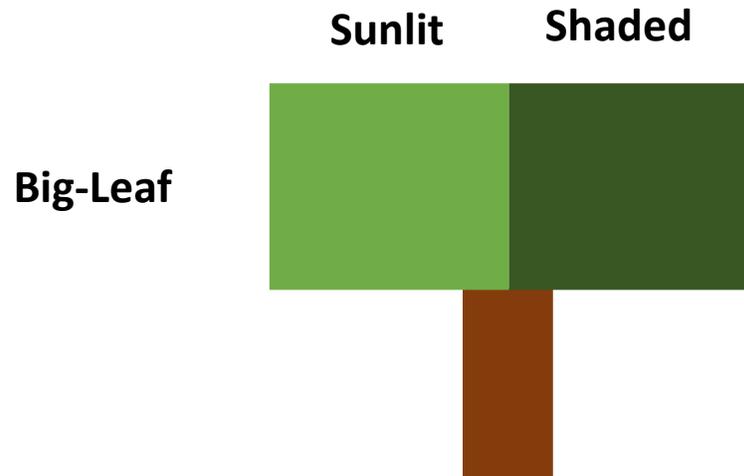

Xylem-vulnerability based optimization models show strong promise for climate-vegetation modeling

Questions

- Leaf-level Model -> Canopy-Level Model

How Do These Stomatal Conductance (g_s) Models Behave in

**Multilayer
Canopy Model?**

Multilayer Canopy Model (CLM-ml)

CLM-ml v1
(Bonan et al., 2018)

Canopy structure

- Multilayer canopy (28-54 layers, height-dependent)
- Beta distribution for leaves; uniform for stems

Scalar & turbulence

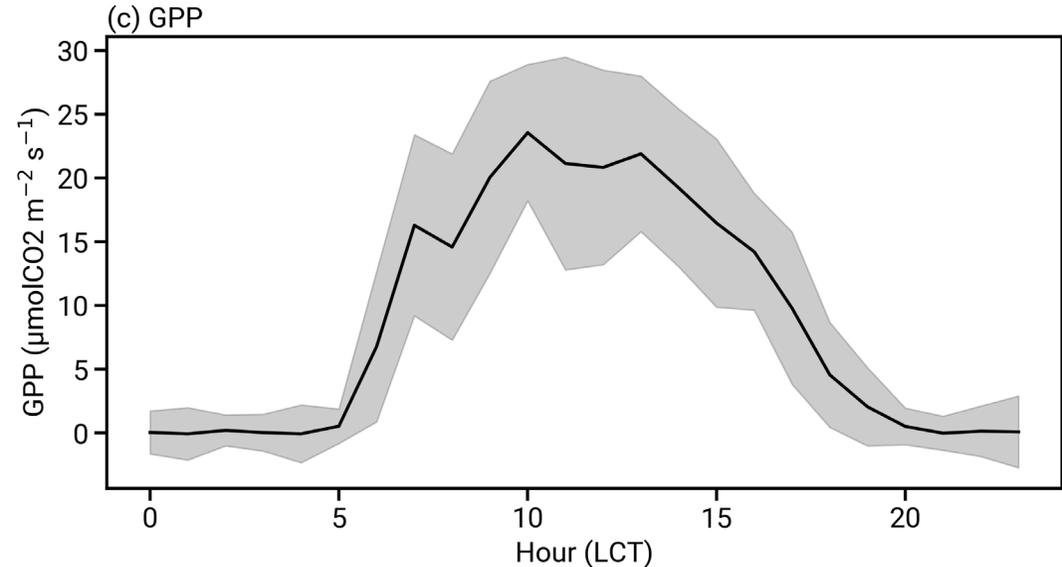

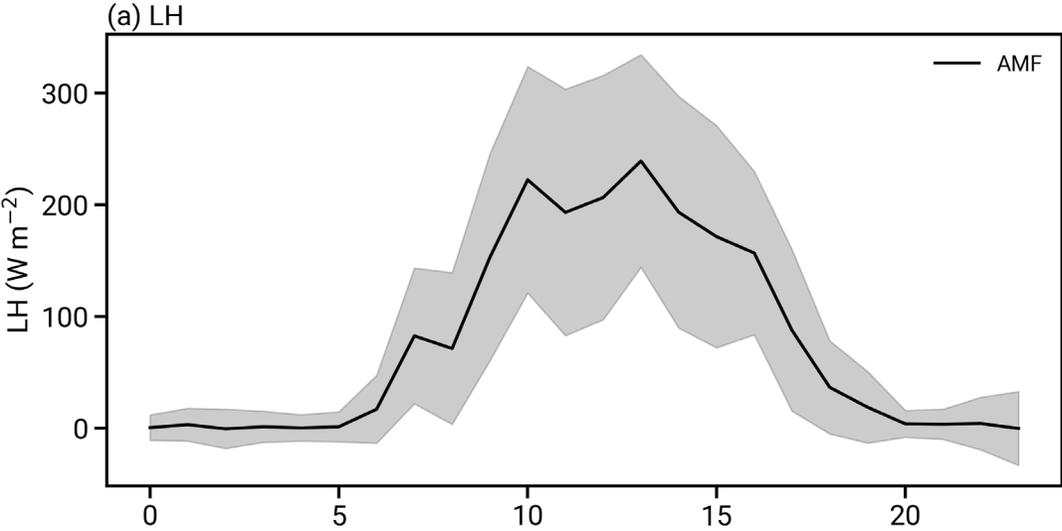

- Conservation-based scalar profiles
- Roughness sublayer parameterization

Plant hydraulics and capacitance

Stomatal Conductance (g_s) Model in CLM-ml

- *Ball et al., 1987*: $g_s = g_0 + g_1 A_n \frac{h_s}{c_s}$
- *Medlyn et al., 2011*: $g_s = g_0 + 1.6 \left(1 + \frac{g_1}{\sqrt{D}} \right) \frac{A_n}{c_a}$ ← $\frac{\partial A}{\partial E} = \lambda$
- *Cowan and Farquhar (WUE) 1977*: $\max(A - \lambda E)$ or $\frac{\partial A}{\partial E} = \lambda$
- *Sperry et al., 2017*: $\max(A - A_{max} (1 - \frac{k}{k_{max}}))$
- *Wang et al., 2020*: $\max(A - A \frac{E_{leaf}}{E_{crit}})$
- *Potaky et al., 2025*: $g_s = \frac{1.6}{(1-x)(c_a - \Gamma^*)} \left(f_0 \frac{x}{x + \frac{y}{z}} - R_d \right)$
- *Buckley et al., under review*: $g_s = \frac{sr(\psi_s - \psi_c)}{1 + sr \frac{\Delta w}{K}}$

LH and GPP Simulations in CLM-ML

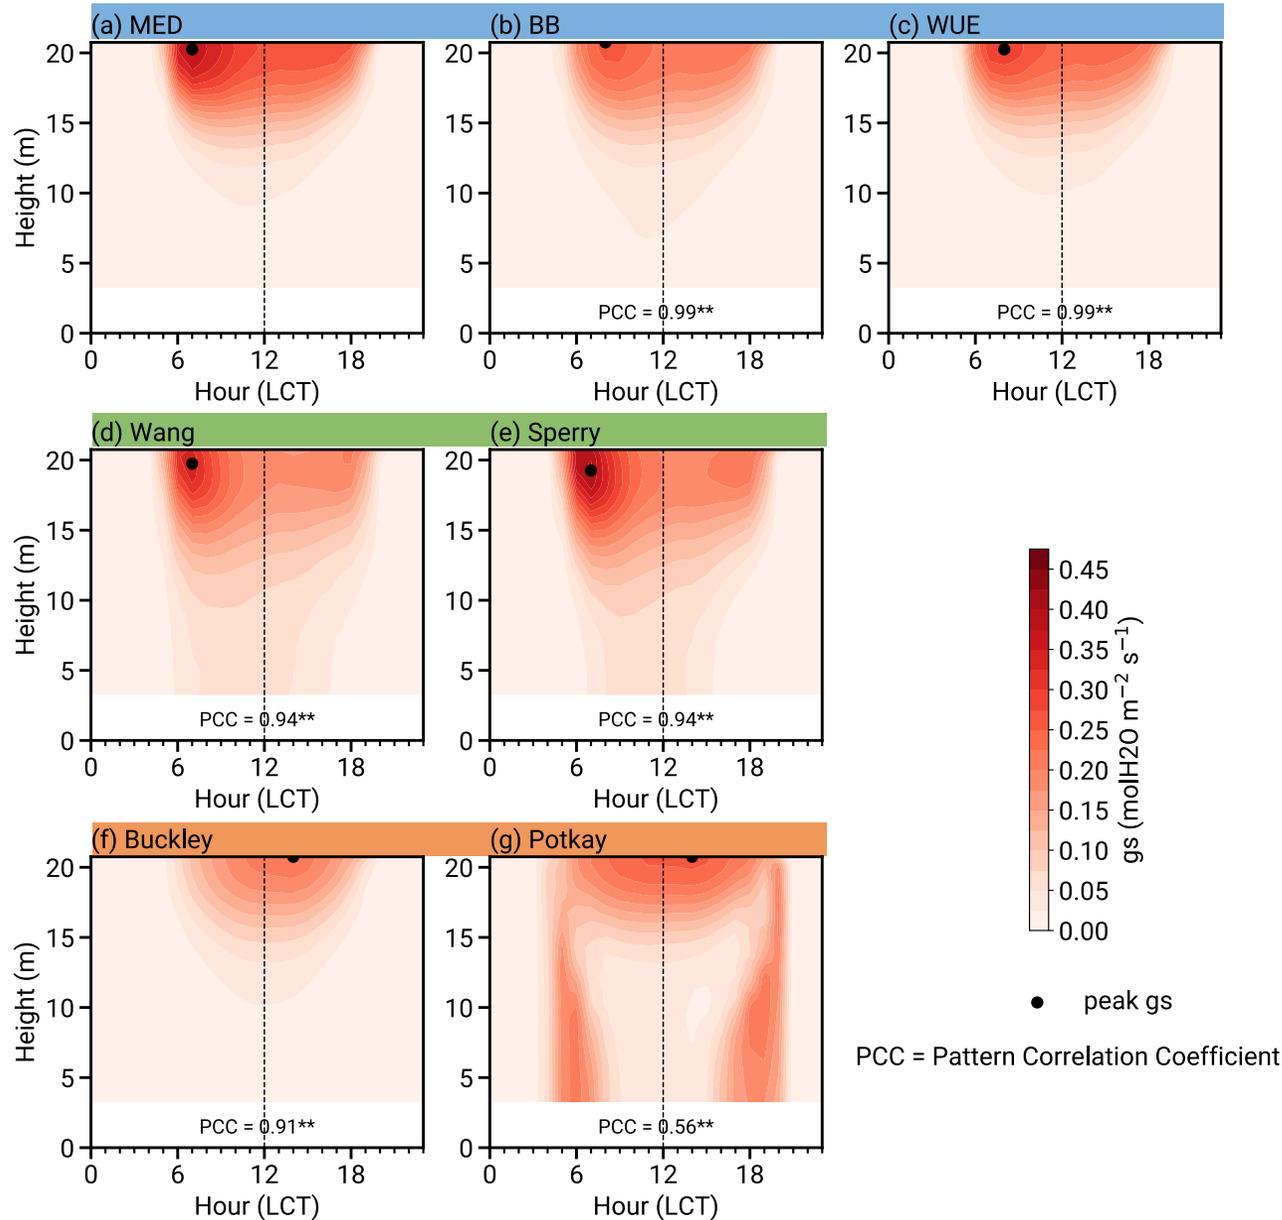

Simulated Vertical Profiles of g_s in CLM-ML

● peak g_s

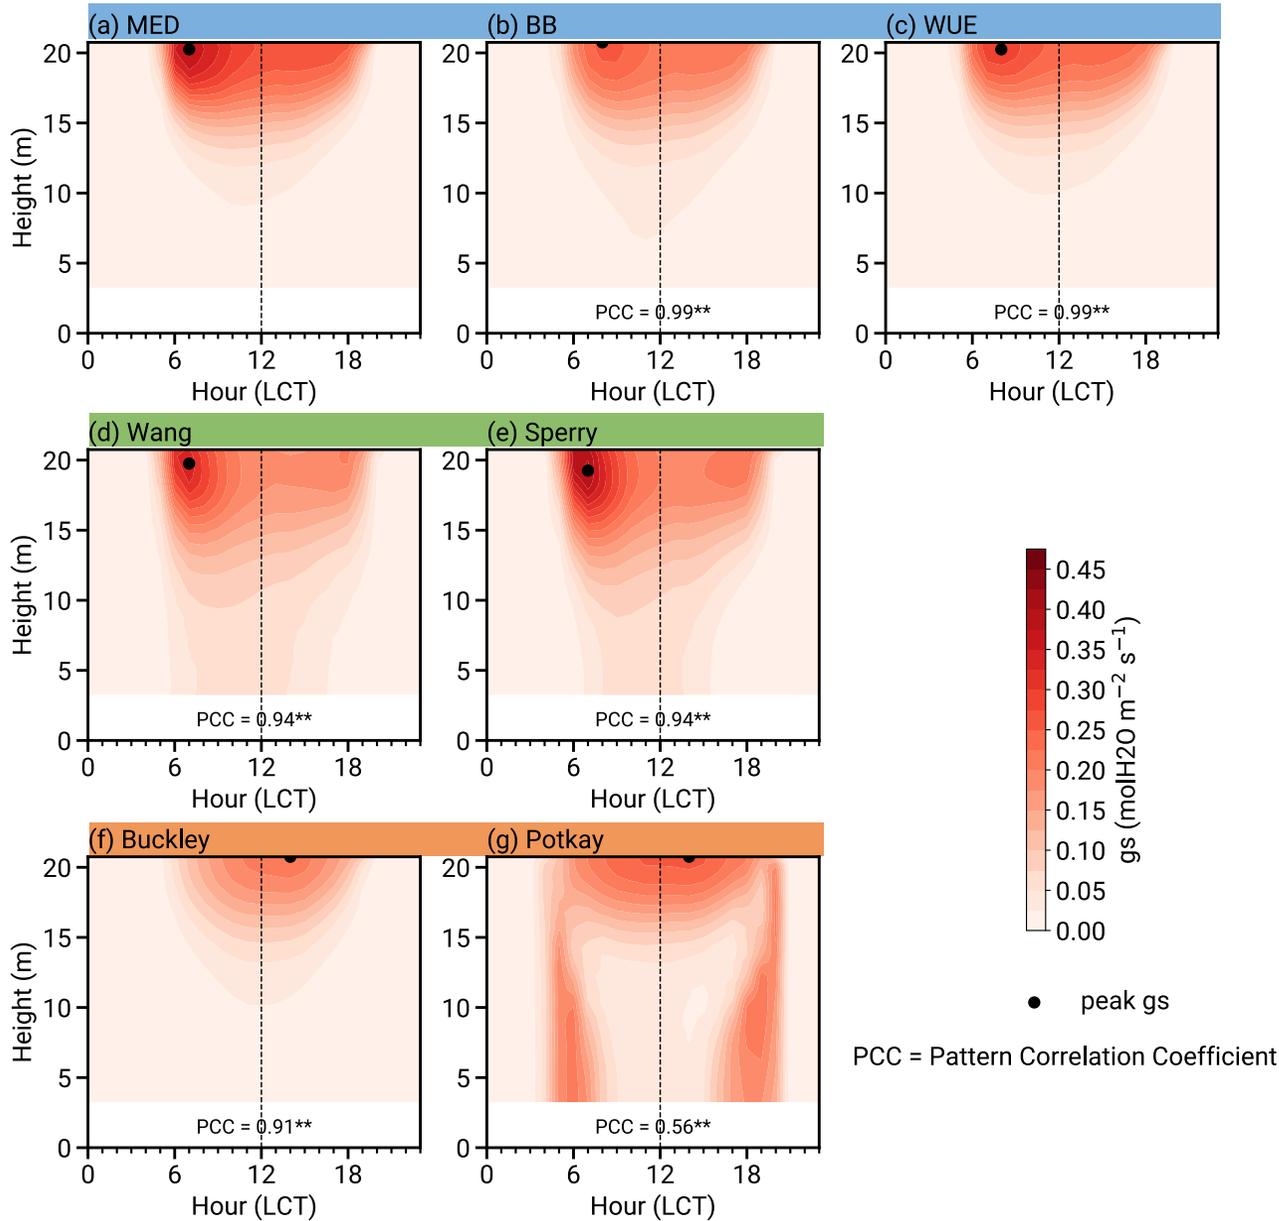

Simulated Vertical Profiles of g_s in CLM-ML

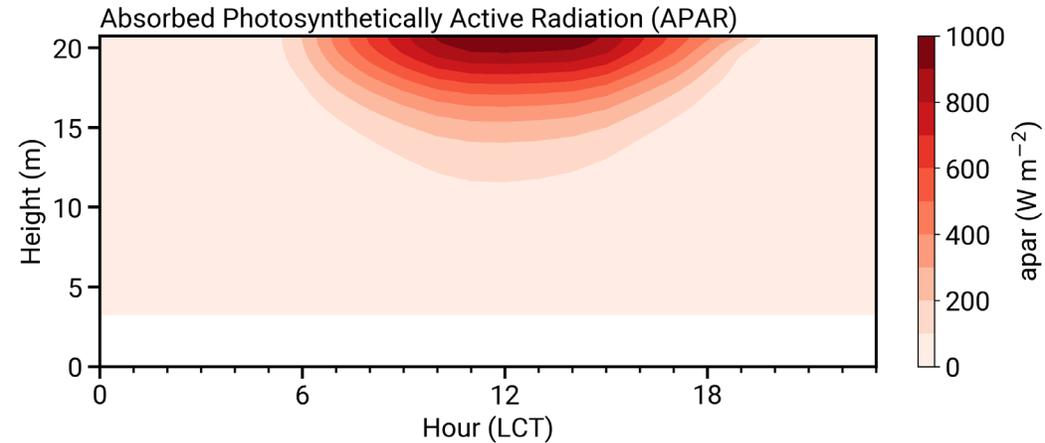

- *gs Peak timing:*
AM (Med, BB, WUE, Wang, Sperry)
VS.
PM (Buckley, Potkay)

- *Early AM & late PM lower canopy:*
Higher g_s in Potkay

Why Do Different gs Models Peak at Different Times of Day?

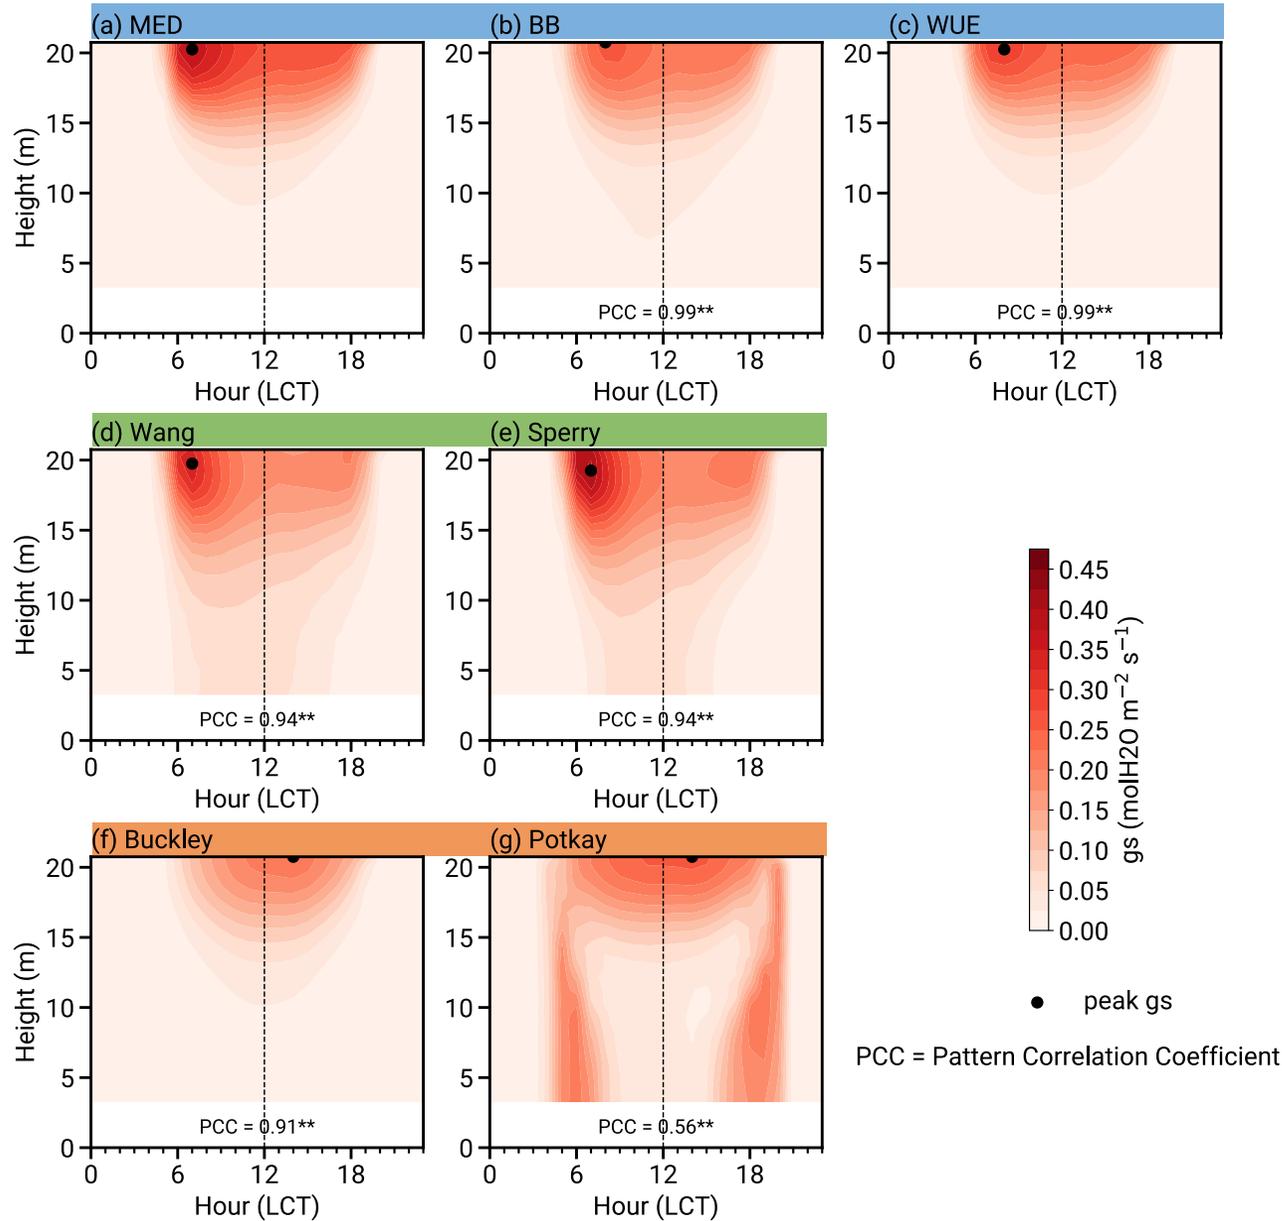

AM (*Med, BB, WUE, Wang, Sperry*)
 VS.
 PM (*Buckley, Potkay*)

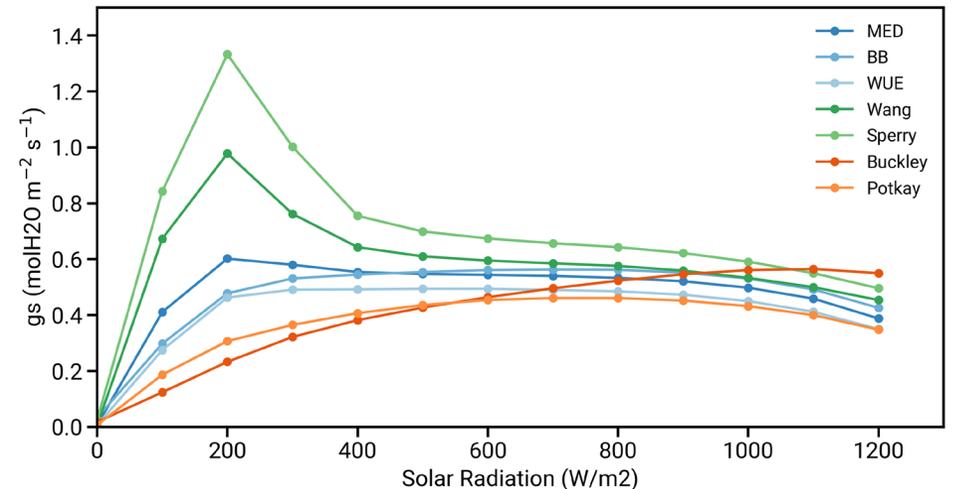

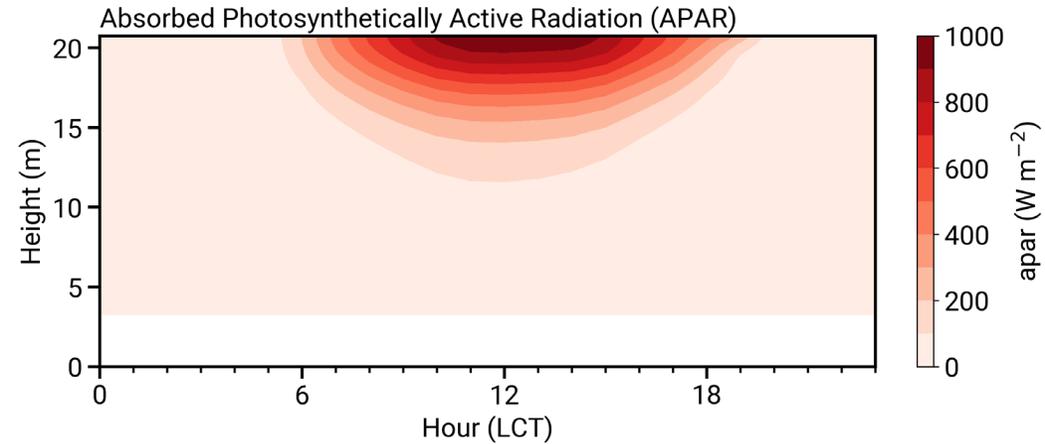

gs-light response curve?

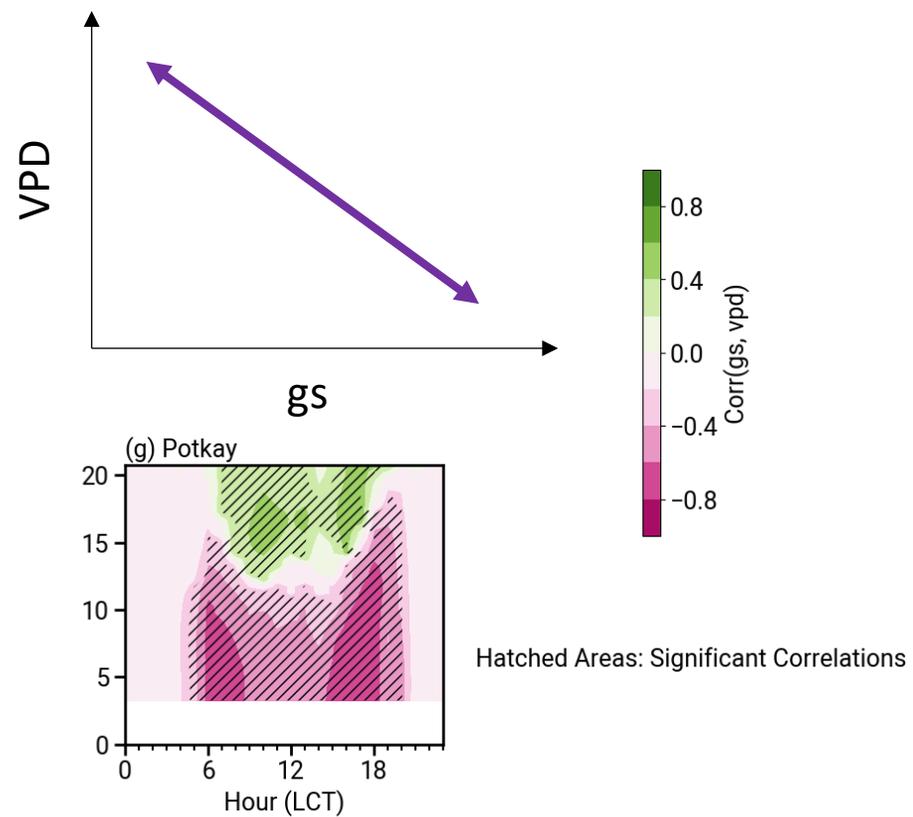

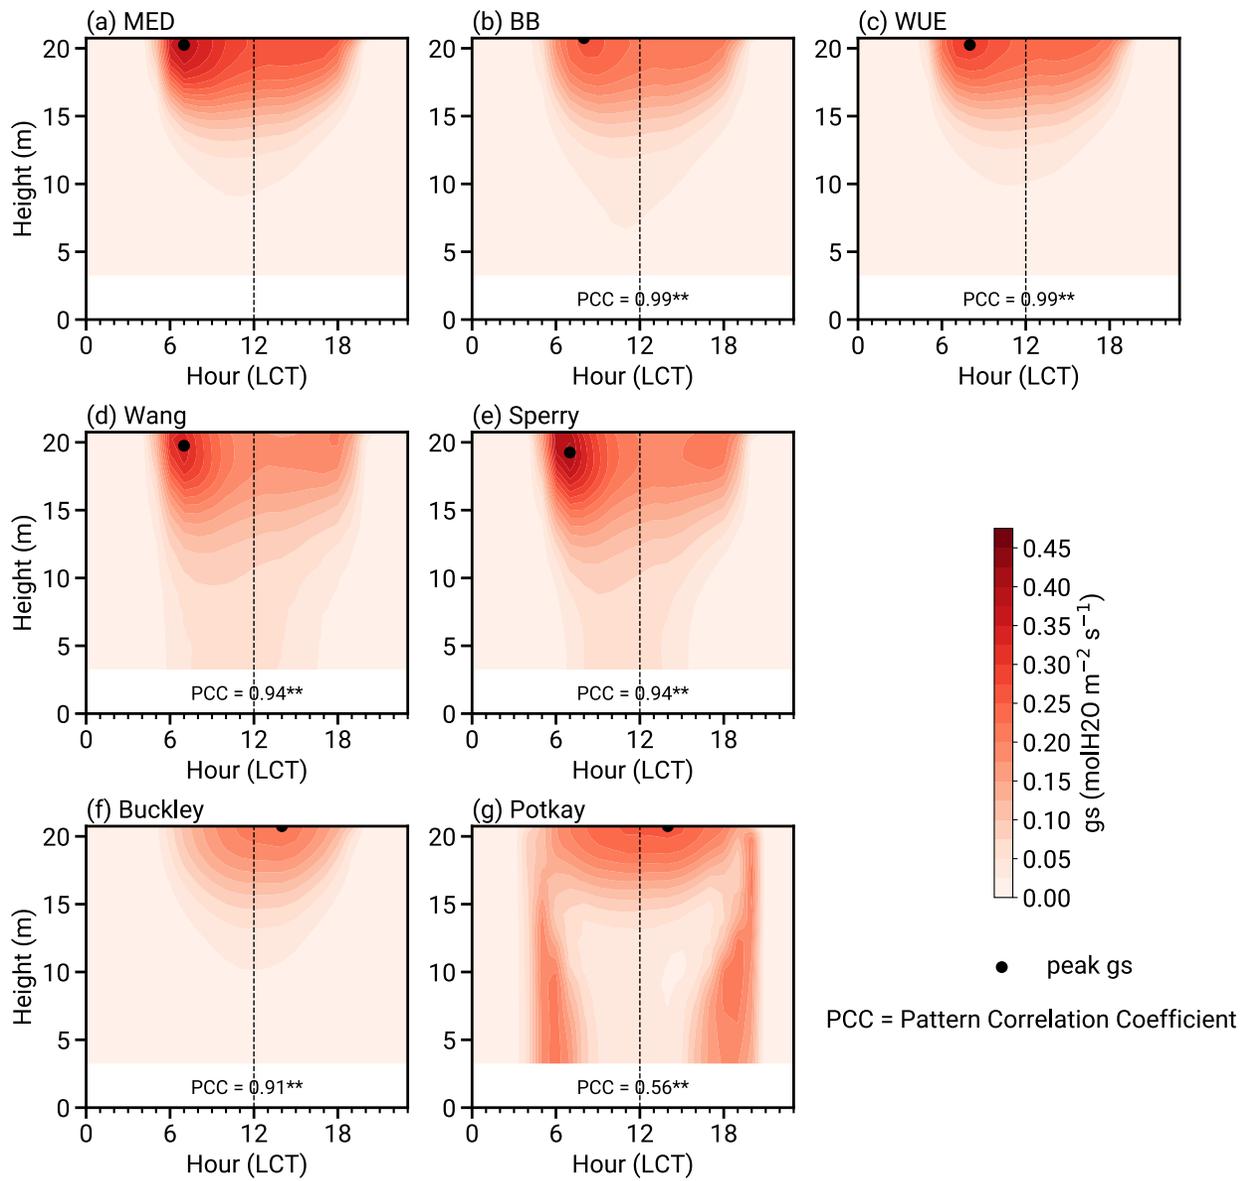

Why Do Different gs Models Peak at Different Times of Day?

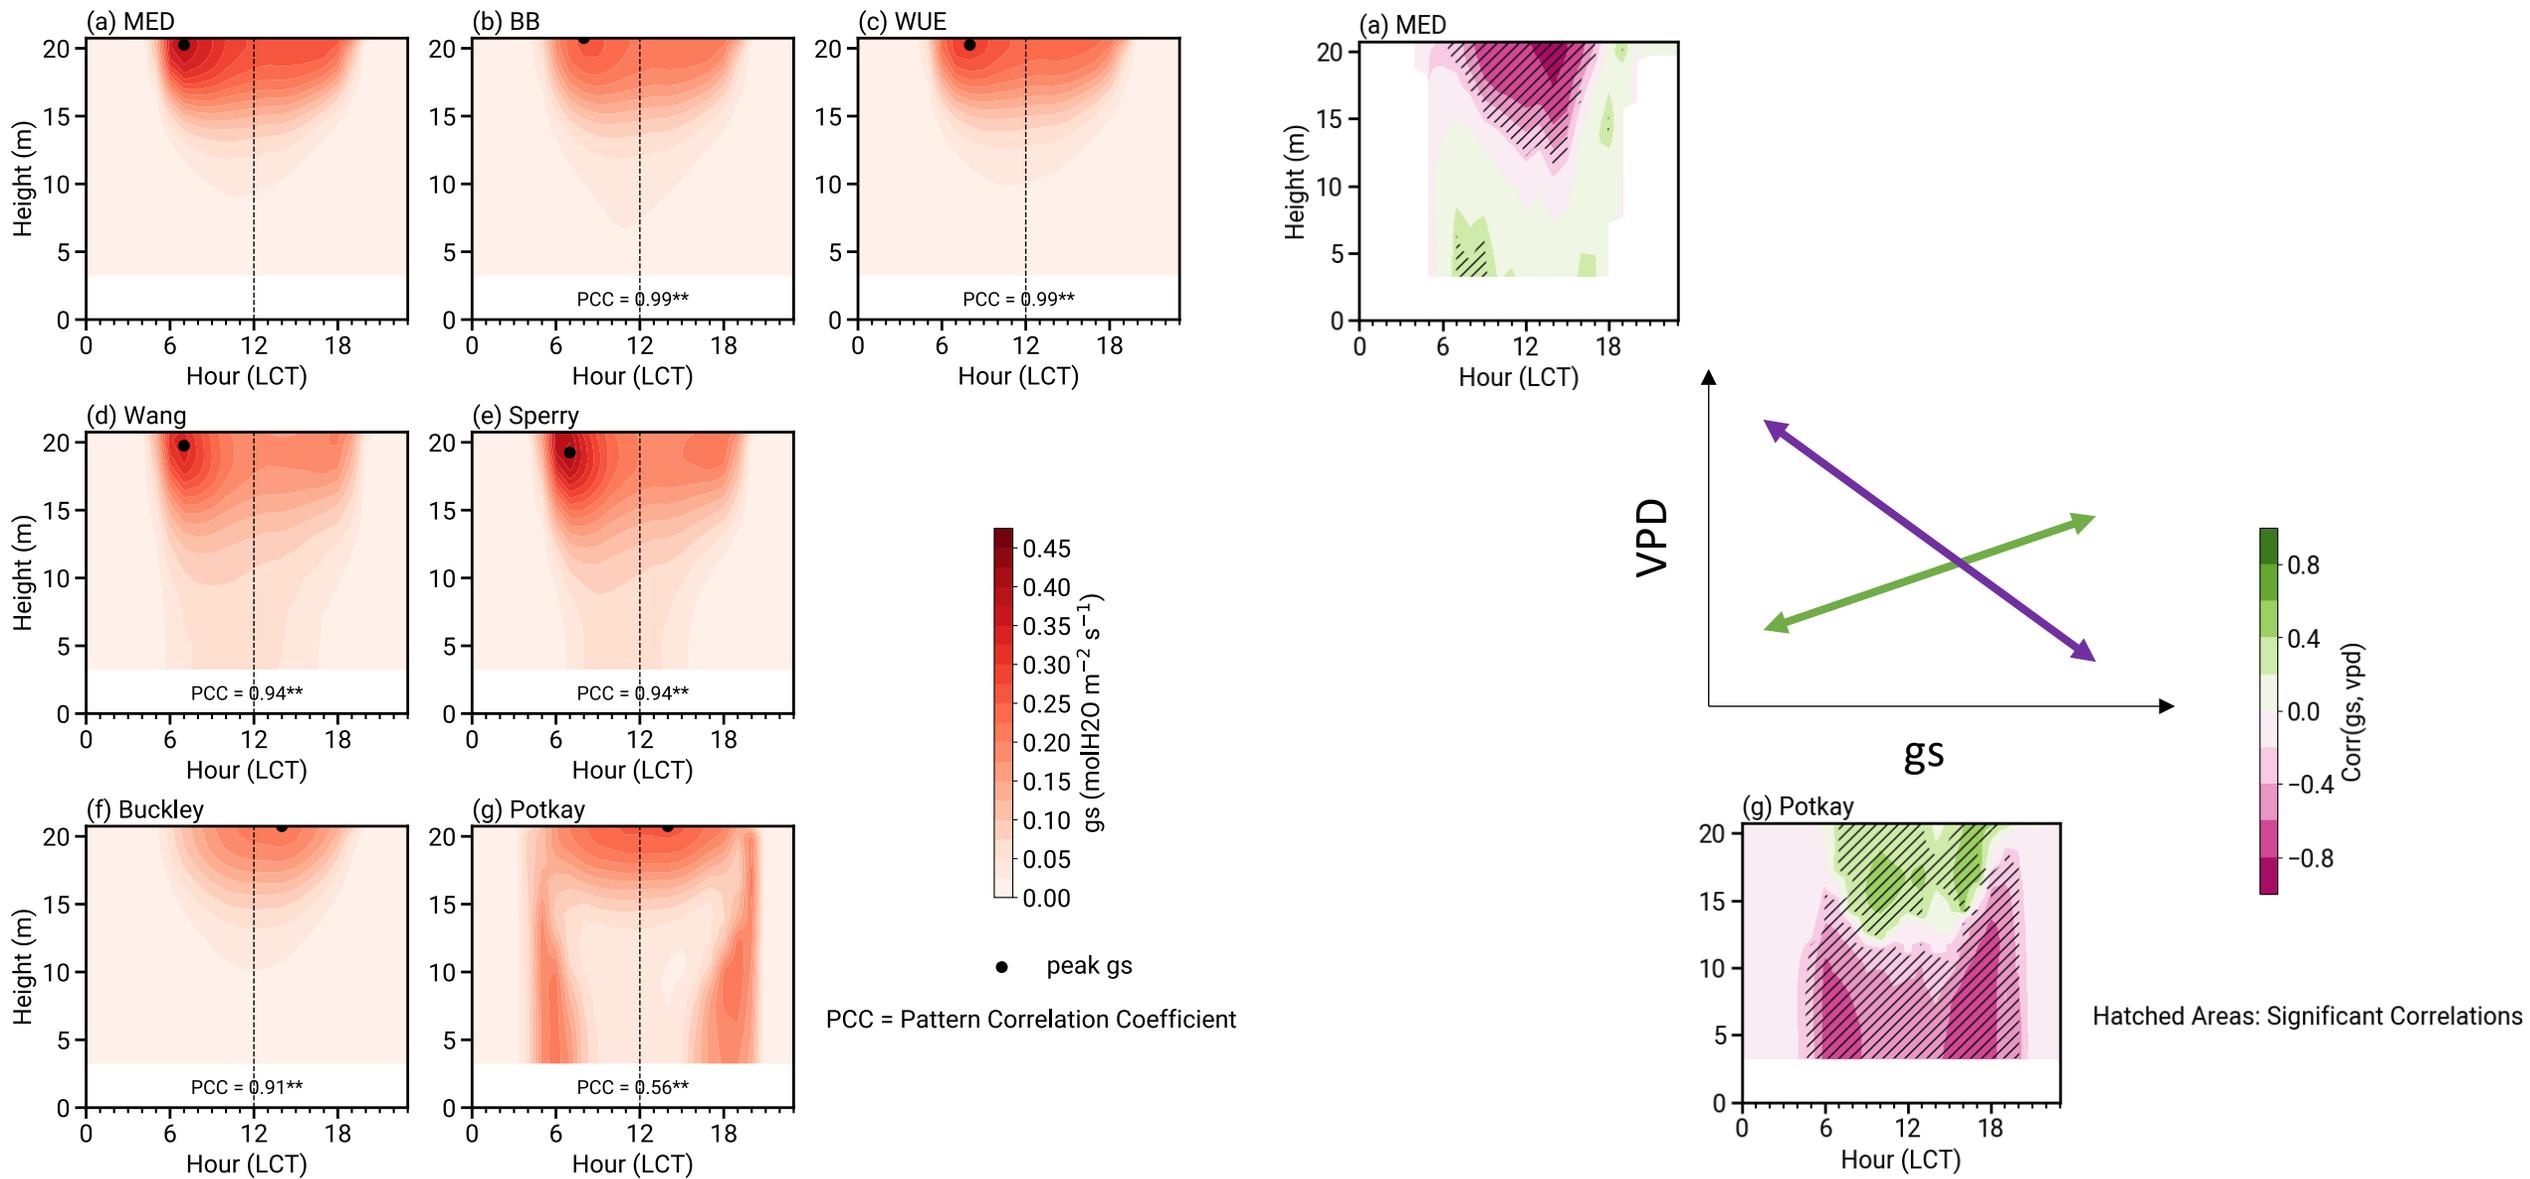

AM (*Med, BB, WUE, Wang, Sperry*)
 VS.
 PM (*Buckley, Potkay*)

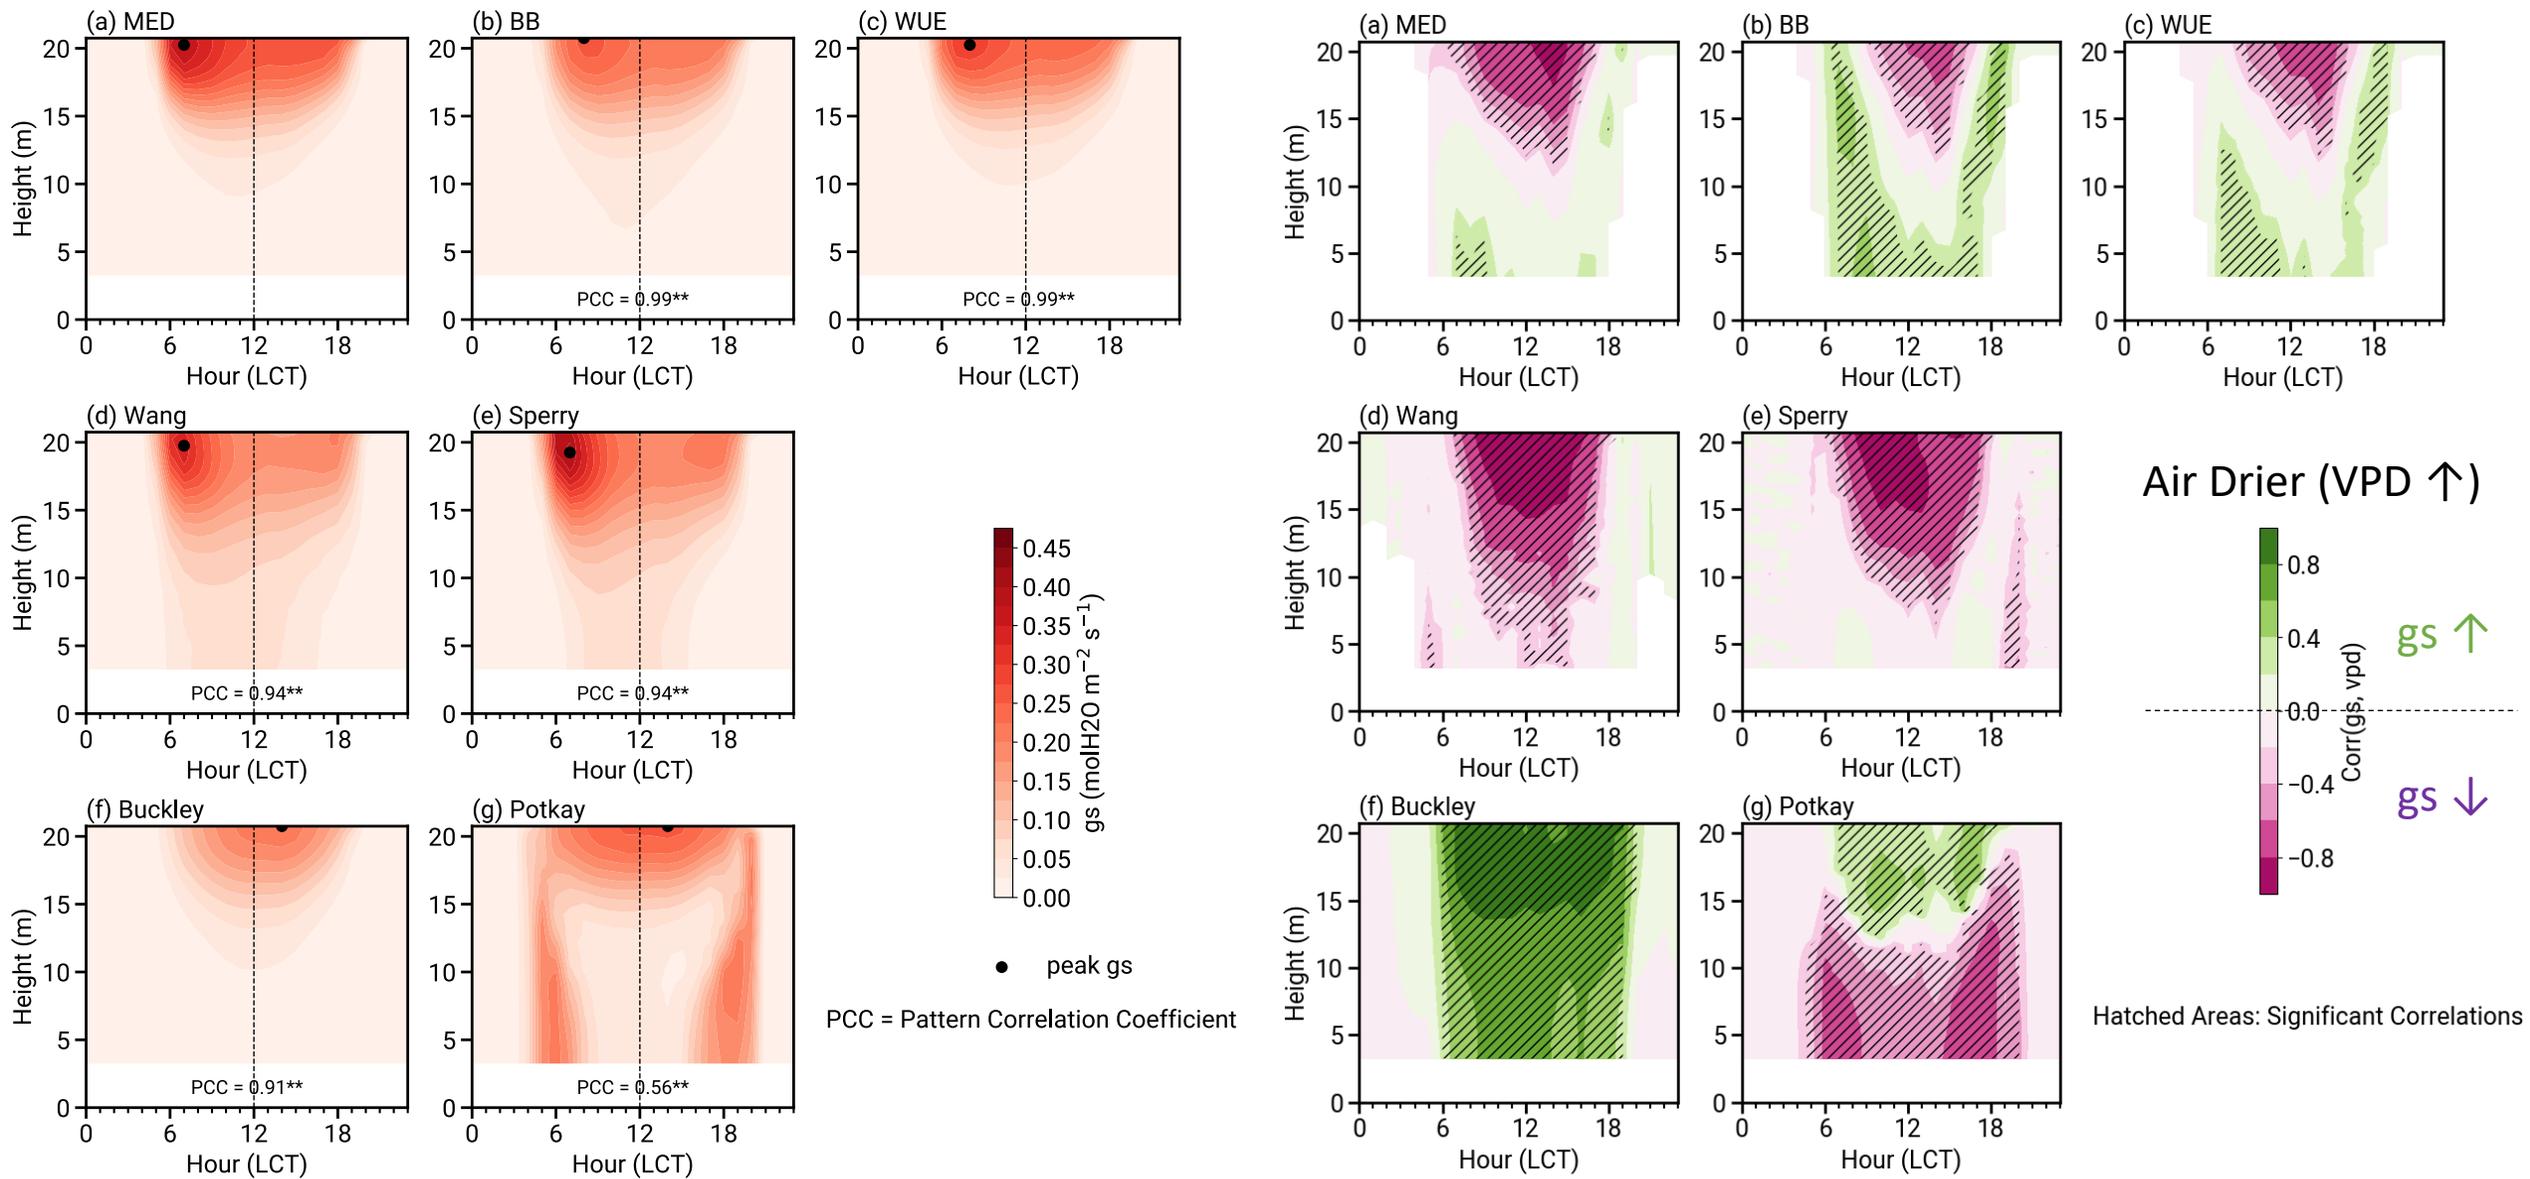

Why the Potkay Model Shows High Lower-Canopy g_s at Both Ends of the Day

Why the Potkay Model Shows High Lower-Canopy g_s at Both Ends of the Day

Why the Potkay Model Shows High Lower-Canopy g_s at Both Ends of the Day

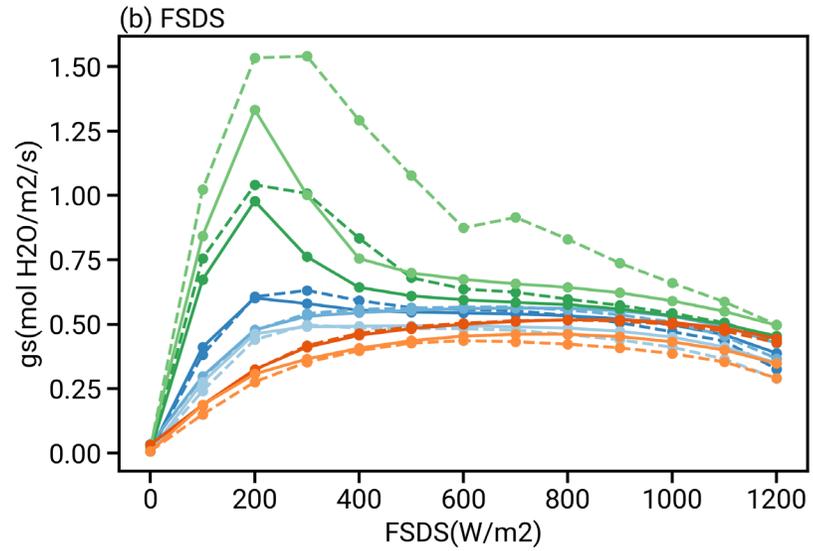

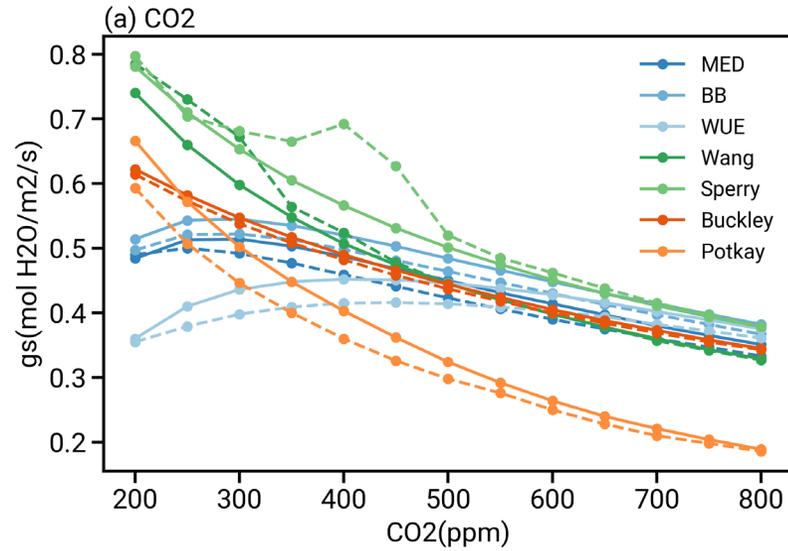

Conclusions and Future Directions

- All tested stomatal conductance models within CLM-ML show good skill in simulating canopy-level LE and GPP.
- Peak g_s timing differs across stomatal models, largely reflecting differences in their light-response curve.
- The Potkay model shows strong sensitivity to VPD, resulting in elevated g_s in the lower canopy during early morning and late afternoon.
- The analysis is based on only one temperate broadleaf site; extending the evaluation across diverse ecosystems is necessary.
- Parameter uncertainty must be quantified when comparing differences among g_s models.
